

Requirement Analysis Phase

Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Item	Detail
Project	Automating Standard Laptop Orders with Flow Designer
Platform	ServiceNow (Flow Designer, Service Catalog)
Phase	2 - Requirement Analysis
Purpose	Define what the solution must do and how it will be accepted.

1. User Story

As a member of the IT procurement team, I want a streamlined process for ordering standard laptops so that tasks are automatically generated and assigned to the hardware team for configuration. This ensures laptops are promptly configured upon arrival, reducing user wait times and minimising manual intervention.

2. Stakeholders

Stakeholder	Interest
End user / requester	Receives a configured laptop quickly.
Approver	Reviews and approves the Standard Laptop request.
IT procurement team	Wants ordering without manual follow-up.
Hardware team	Receives clear configuration tasks assigned to their group.
ServiceNow administrator	Builds, maintains and supports the flow.

3. Functional Requirements

ID	Requirement	Priority
FR1	Users can order Standard Laptop from Service Catalog > Hardware using Order Now.	Must
FR2	Ordering creates a Request, a Requested Item and an approval for the approver.	Must
FR3	After approval, a Catalog Task is created automatically for the Requested Item.	Must
FR4	The task short description is <i>Laptop needs to be configured</i> .	Must
FR5	The task description is <i>Laptop needs to be configured</i> .	Must
FR6	The task is assigned to the Hardware assignment group.	Must
FR7	The flow is attached to the Standard Laptop item through the Process Engine tab, with other automations removed.	Must
FR8	The task is visible under Catalog Tasks on the Requested Item.	Must
FR9	Only Standard Laptop requests create this task; other catalog items are unaffected.	Should
FR10	Only one configuration task is created per Requested Item.	Should

4. Non-Functional Requirements

Area	Requirement
Reliability	The task is created every time, without user action.
Maintainability	Built in Flow Designer so admins can read and change it visually.
Security	Flow runs as System User; only authorised approvers can approve.
Usability	Ordering and approval use the standard Service Catalog experience.
Auditability	Request, approval and task records give a full trail.

5. Data and Records Used

Record / table	Use
Catalog item (Standard Laptop)	Item users order; flow is attached here.
Request / Requested Item (sc_req_item)	Created on order; trigger for the flow.
Approval	Approver decision before the task is created.
Catalog Task (sc_task)	Configuration task created by the flow.
Group (Hardware)	Assignment group for the task.

6. Assumptions and Constraints

- A ServiceNow instance with Flow Designer and Service Catalog is available.
- The Standard Laptop item exists under the Hardware category.
- The Hardware group exists and has members.
- An approver is available for Standard Laptop requests.

7. Out of Scope

- Purchase orders, vendor management and asset receiving.
- Other catalog items.
- Reporting dashboards.

8. Acceptance Criteria

- Ordering and approving a Standard Laptop creates one Catalog Task.
- The task shows the correct short description and the Hardware group.
- No task is created for other catalog items or before approval.
