

Project Planning Phase

Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Item	Detail
Project	Automating Standard Laptop Orders with Flow Designer
Platform	ServiceNow (Flow Designer, Service Catalog)
Phase	4 - Project Planning
Purpose	Plan the work, roles, sequence and risks.

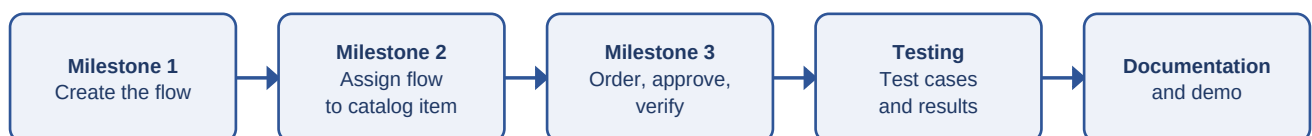

1. Scope of Work

Deliver the Standard Laptop automation in three milestones (flow, flow assignment, service catalog test), followed by testing, documentation and a demonstration.

2. Work Breakdown

ID	Activity	Owner (role)	Deliverable
M1.1	Create flow Standard Laptop Task (Global, System User)	ServiceNow developer	Flow saved
M1.2	Add Service Catalog trigger	ServiceNow developer	Trigger configured
M1.3	Add Create Catalog Task action with descriptions and Hardware group	ServiceNow developer	Action configured
M1.4	Save and activate the flow	ServiceNow developer	Active flow
M2.1	Open Standard Laptop in Maintain Items; remove other automations	ServiceNow administrator	Clean Process Engine tab
M2.2	Attach the flow and save	ServiceNow administrator	Flow assigned to item
M3.1	Order Standard Laptop through Service Catalog	Tester	Request number
M3.2	Approve from the Approvers section	Approver	Approved request
M3.3	Check Catalog Tasks on the Requested Item	Tester	Task with description and group

3. Sequence and Dependencies

- Milestone 2 depends on the flow being saved and activated in Milestone 1.
- Milestone 3 depends on the flow being attached to the item.
- The Hardware group must exist before the flow is tested.

4. Roles

Role	Responsibility
Project owner (IT procurement)	Confirms requirements and accepts the result.
ServiceNow developer / administrator	Builds and attaches the flow, supports testing.
Approver	Approves test and live requests.
Hardware team lead	Confirms the tasks arrive in the right group.
Tester	Runs the test cases and records results.

5. Risks and Mitigation

Risk	Impact	Mitigation
Flow runs at submission, not after approval	Task created too early	Add an Ask for Approval step before the task action.
Other automation still on the catalog item	Duplicate tasks or approvals	Remove other automations on the Process Engine tab.
Hardware group missing or empty	Task not picked up	Confirm group and members before testing.
Flow not activated	No task is created	Check flow status after saving.
Flow name typed differently	Wrong flow chosen	Use one exact name: Standard Laptop Task.

6. Tools and Environment

- ServiceNow instance (development or test) with Flow Designer and Service Catalog.
- Admin access for setup; a test approver.
- Scripts and CSV data supplied for the scripted option.
